Professional Profile

Backend & Automation Engineer with hands-on experience building, deploying, and maintaining production-ready web applications using **ASP.NET Core** and **Laravel (PHP)**, and business workflow automation with **n8n** and **Microsoft Power Platform**. Strong background in MVC architectures, RESTful APIs, authentication and authorization systems, and database-driven business logic, backed by a computer engineering foundation and practical networking and infrastructure experience. Eager to contribute to engineering teams building reliable, maintainable solutions.

Technical Skills

Backend & Frameworks: ASP.NET Core (Web API, MVC, Razor Pages), Laravel 12, PHP, Eloquent ORM, Blade, RESTful API design, authentication & authorization (Fortify, Laravel Breeze, RBAC)

Automation & Integrations: n8n on n8n Cloud (multi-step pipelines, webhooks, Data Tables), WhatsApp integration via self-hosted WAHA on Railway, LangChain Information Extractor, OpenAI API, Power Apps, Power Automate, Dataverse

Databases: PostgreSQL, MySQL, MariaDB, SQLite, Entity Framework Core, migrations, seeders, relationships

Frontend & Tooling: HTML5, CSS3, Tailwind CSS, JavaScript, Vite, npm

Cloud & DevOps: Laravel Cloud (deployment, hosting, object storage), AWS EC2, Railway, Git, Composer

Real-Time & Asynchronous Processing: Pusher, SignalR

Software Engineering: design patterns, data structures & algorithms, secure coding practices, third-party API integration

Microsoft 365 & Identity: Entra ID (Azure AD) administration in a personal developer tenant (users, licenses, passwords, MFA and security defaults) via the Microsoft 365 and Entra admin centers

Networking & Infrastructure: PoE Layer 2 / Layer 3 switch configuration (VLANs, subnetting) via CLI and web interface, Fortinet firewall policies, Wi-Fi access points, structured cabling (crimping, testing, patch panels, racks), and UPS and server room power in a 100–500-user enterprise network; exposure to Windows Server administration (domain controller, Hyper-V, print server)

Virtualization & Home Lab: Hyper-V, VMware Workstation, and VirtualBox running Windows Server, Linux, and Windows client VMs; home network with separate VLANs, mesh Wi-Fi, and structured cabling

Experience

4/2026 – Present Trainee – Elancer, UCASTI

- Developing a real-world Laravel project under the direct supervision of Eng. Mohammed Safidi, covering advanced Laravel topics.
- Training in professional freelancing: finding and securing work on freelance platforms and through social media.

3/2025 – 5/2025 Intern - Microsoft Power Platform, UNRWA

- Worked on automating workflows and creating data-driven applications using Power Apps and Power Automate.
- Collaborated with a technical team to design low-code solutions for internal operations.
- Assisted in integrating Microsoft services to improve data accessibility and reporting.

Certifications

- TOEFL iBT – 5.0/6.0
- Microsoft Power Platform Training (UNRWA Internship)

Notable Projects

WhatsApp Restaurant Order Automation (n8n)

A 30-node **n8n** pipeline that turns customer WhatsApp messages into tracked orders, using a **LangChain Information Extractor** to structure free-text requests and an order state machine to follow each order through to delivery. Staff confirm orders and assign drivers through commands restricted to an authorized sender, while the kitchen is notified in a WhatsApp group. Messages are sent through a self-hosted **WAHA** gateway on **Railway**, with a parallel track on the official **Meta WhatsApp Cloud API** in progress.

Job Recruitment Platform (Laravel Ecosystem)

Two Laravel applications hosted on **Laravel Cloud**: a **Laravel 12** employer back-office for managing companies, job listings, and categories, and an applicant-facing app where job seekers browse jobs, apply, and track their application status. Applicant CVs are stored in **Laravel Cloud object storage** and analyzed automatically with the **OpenAI API** to extract insights for recruiters.

Applicant Tracking System (ATS)

A Microsoft Power Platform solution that matches candidate CVs against job descriptions, built with **Power Apps**, **Power Automate**, and **Dataverse**. Power Automate flows triggered from **Microsoft Lists** drive the matching process.

Freelance Project Management System

A lightweight web application where freelancers and clients collaborate, exchange feedback, and share files. Real-time chat and notifications run over **SignalR**.

Healthcare Booking System (University Project)

A full-stack system for managing appointments between patients, clinics, and doctors, with an **ASP.NET Core Web API** backend, **Angular** dashboards, and a **Flutter** mobile app for patients. It supports secure multi-role authentication and real-time scheduling.

Education

BSc: Bachelor's in computer engineering, The Islamic University of Gaza (2020 – 2025)
